

Mechanical Seal Repair

Colorado Seals repairs all types of damaged mechanical seals to “like new” condition, quickly and at a reasonable cost. The answer to your sealing problems is not always a new seal – it’s a better repair service!

Why repair mechanical seals?

When deciding to repair your damaged seals, there are some important considerations:

1. Seal repair is much more cost effective than purchasing new seals.
2. Repair evaluations can show necessary material upgrades for improved performance or material downgrades to save you money.

Why use Colorado Seals for your seal repairs?

- We provide seal repair for any and all mechanical seal manufacturers and types
- A failure analysis is performed on all seals to determine possible changes, which can improve performance or reduce the cost
- We offer very competitive prices and lead times
- All cartridge seals are pressure tested at 40 PSI for 10 minutes
- Hard faces are lapped to within 2 light bands
- All elastomers, fasteners, multi-springs and soft faces are replaced to ensure high quality and performance
- Repaired metal parts are sandblasted and polished
- Many repair parts are kept in stock
- FDA-approved parts are available
- We offer expert repair training with 75+ years of collective experience
